EPA Completes Cleanup of Hilltop Residence

HILLTOP RESIDENTIAL LAB

7110 Hilltop
Upper Darby, PA

We are contacting neighbors in this area to inform them of the following:

On March 13, the United States Drug Enforcement Agency arrested a tenant of the property at 7110 Hilltop after finding various laboratory chemicals that could be used in the production of methamphetamines.

Following the arrest, members of Delaware County Emergency Services surveyed the property, found various hazardous chemicals and asked for EPA assistance.

On Wednesday March 15, EPA was able to enter the property and clean up the hazardous chemicals. The materials were packed in twelve 55-gallon drums. EPA completed the cleanup on Friday, March 17 and left the property at that time. The drums were placed in the rear yard of the property and arrangements were made for the off-site disposal of the chemicals. The drums were removed from the property on Friday March 24.

EPA has completed its involvement with the Hillside Residential Lab. Reuse of the property after EPA cleanup will depend upon the disposition of restrictions on human habitation placed by the United States Drug Enforcement Agency and the Upper Darby Township Department of Public Health.
